Environmental Endurance Testing System Jig for Stretching Tester DLD111L + ET254004-006

ST-N

YUASA SYSTEM has been developing Tension-Free[™] endurance testing systems since 2012. With our in-house expertise in mechanical, electrical, and software engineering, we have developed accurate testing methods for next generation devices, components, and materials. Tension-Free[™] endurance testing reduces product design time by producing more consistent and reliable test data. Samples undergo the desired testing without being subjected to undesired tension introduced by the needs of the test equipment. As desired, our jigs also can operate with tension.

The motor unit (Linear Reciprocating Unit) drives the stretching test jig for planar and linear objects.

The test jig enables stretching tests for planar and linear objects to a constant length repeatedly.

The test jig can be installed in the environmental chamber with optional parts.

Stretching test for planar and linear objects including Flexible Displays, OLED devices, Barrier Film, Flat Cables, Flexible Printed Circuits, Wearables & automobile applications

The test jig holds the test sample between a moving clamp and a fixed clamp. As the moving clamp moves away from the fixed clamp the sample is stretched.
